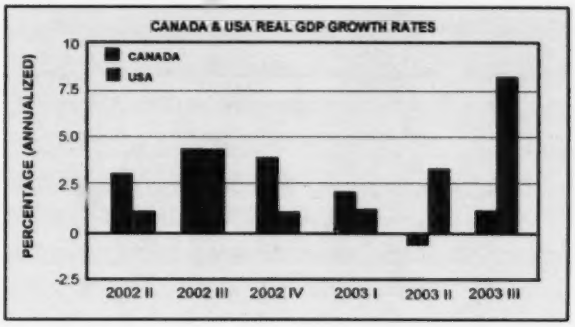
Introduction

The summer of 2003 was unkind to the Canadian economy, especially in the areas of trade and tourism. The Canadian dollar's sharp increase against the U.S. dollar, coupled with the sluggish growth in consumer spending in the U.S., negatively impacted exports. In addition, the Toronto SARS crisis dissuaded vacationers from travelling to the city during the summer of 2003. At the end of the summer, southern Ontario and the northeastern United States were shocked by a power outage that kept many Ontarians away from work for nearly one week. Forest fires raged on the west coast, and into parts of Alberta, dispossessing families of their homes, and destroying many hectares of forest. Finally, a single case of mad cow disease closed international borders to Canadian beef.

However, good news has come with the fall of 2003. The U.S., in the third quarter, posted GDP gains of 8.2 percent, on the strength of large increases in fixed private investment, both residential and non-residential, exports of goods and services, and increased personal consumption expenditures. Imports of goods contracted slightly in the 3rd quarter of 2003, after a massive increase in the second quarter, on the order of 13.5 percent. Imports of services grew by 16.5 percent after dropping 11.4 percent in the second quarter. Overall, U.S. imports grew by 1.5 percent in the 3rd quarter.

Canadian export growth may be weak, as continued high interest rates in Canada, relative to the U.S., support the Canadian dollar's position against the U.S. dollar. Generally, the U.S. dollar is weak against other foreign currencies, namely the Euro.

Canada's real GDP grew by 3.4 percent in 2002, continuing its solid performance; real GDP in Canada has not grown by less than 2.0 percent since 1996. In 2003, after three quarters of data, it appears there has been a bit of an economic slowdown, with annualized real GDP growth of 2.0 percent, -0.7 percent and 1.1 percent in the first, second and third quarters of 2003, respectively.



The gradually strengthening North American economy, as well as a bit of a respite from the recent drought conditions of 2001 and 2002, is leading Saskatchewan to a large expected increase in the 2003 GDP. Private estimates run between 3.4 percent and 5.2 percent growth. Employment in Saskatchewan increased again in 2003, high energy prices have aided the mineral fuels sector, and crop output has rebounded. Other statistics also indicate good economic growth in Saskatchewan. Retail trade was up in Saskatchewan for the fifth consecutive year. There was an increase in motor vehicle sales, both private and commercial, and the value of building permits increased.

The agricultural industry assisted GDP growth in Saskatchewan, finally recovering from consecutive drought years. The spring snowstorms of 2003 brought much needed moisture across much of the grain belt, and farmers seeded more land in 2003 than in either 2001 or 2002.

Employment

Just as in 2002, employment levels in Saskatchewan have enjoyed near record highs in some months of 2003, reaching just over 500,000 employed in June and July. The eleven-month average employment in 2003 was 487,160 people, a 1.1 percent increase from the eleven-month average in 2002 of 481,770 people. If the trend continues through December, 2003 will have had the highest average employment numbers on record.

Saskatchewan's unemployment rate continues to be one of the lowest in the country, with an eleven-month average of 5.7 percent. The national unemployment rate was 7.7 percent for this period. Saskatchewan's labour force participation rate rose 1.0 percentage points to 68.3 percent, and the participation rate for Canada advanced by 0.7 percentage points to 67.6 percent.

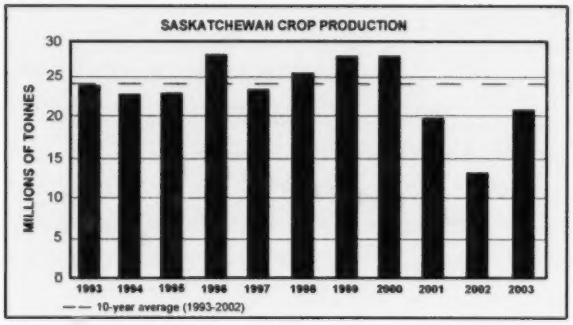
Employment growth came from a general strengthening in the service industry. Employment in the goods-producing sector actually fell by 4,060 jobs. The decrease was mostly due to a drop in employment in the agricultural industry of 3,700 jobs, or 7.3 percent. The poor crop year in 2002 led to a continued below average employment level in that industry.

Employment in the manufacturing sector was down Canada-wide, and Saskatchewan received its share of job losses in this industry. Shipments from certain manufacturing groups fell, as market uncertainty grew in Canada. At the start of 2003, computer and electronic product manufacturers cut jobs nation-wide. Also, new orders have been steadily decreasing since about the middle of 2002.

The mining and oil and gas extraction industry witnessed an increase in employment of about 1,300 employees. Production and sales in the mining industry grew throughout 2003, causing a need for more workers.

Agriculture

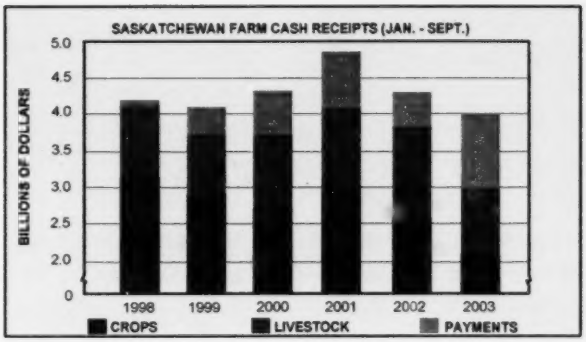
The expected recovery in 2003 from the devastation of 2002 came to fruition. With the heavy snow in early 2003 providing much needed moisture to the soil, crop production was up by 36.0 percent from 2002, to a total of 20.3 million tonnes of grains. However, below normal precipitation throughout the summer and the return of grasshopper swarms limited crop production, keeping it below the ten-year average.



Improved grain production for parts of the world in 2003 is putting downward pressure on the prices for wheat, barley and canola, but overall the world wheat supply is not expected to grow very much.

The discovery of a cow infected with BSE, or mad cow disease, was very damaging to cattle marketings. Total cattle marketed was down by 10.1 percent through August, to about 795,000 cattle. Feeder cattle marketed to Saskatchewan mitigated against the losses somewhat, wtih an increase of 61.7 percent, or nearly 100,000 cattle.

Farm Cash Receipts from January to September of 2003 were 6.5 percent lower than those for the same period of 2002. Owing to the disappointing growing season of 2002, total crop receipts were substantively reduced, down 18.8 percent. Crop receipts for the first three quarters of 2003 totaled $2.12 billion, down $492 million from 2002.



Livestock receipts were down 25.3 percent, which represents a drop of $302 million. A 42.3 percent drop in sales receipts for cattle, and a 26.1 percent drop in sales receipts for calves, represented basically the entire loss in livestock receipts. Losses came primarily in the third quarter of 2003, resulting from the discovery of mad cow disease in the Alberta beef stock.

The losses from crop and livestock receipts were countered by a large increase in crop insurance payments, to the tune of 149.0 percent, or nearly $400 million. Other payments, which includes payments from programs designed to mitigate the financial damage of unusual climactic or economic events in the agricultural sector, were up nearly 890.4 percent, representing an increase of nearly $45 million.

Economic Recovery

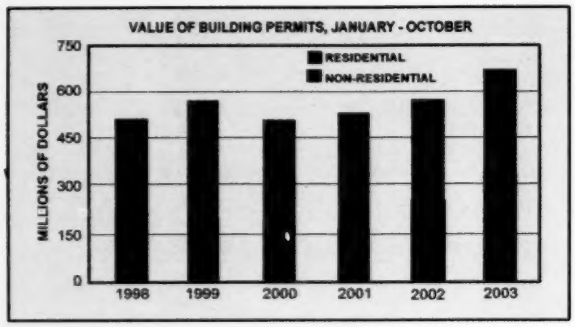
At the end of 2002, real GDP was down 1.0 percent from 2001. All indications are for positive GDP growth in 2003, continuing through 2004 and beyond. Continued employment growth and low interest rates have combined to buoy consumer confidence. Retail sales, value of building permits, and manufacturing shipments have all increased in 2003.

In the first three quarters of 2003, retail trade was up by 5.0 percent relative to the first three quarters of 2002. Major increases came from such trade groups as drugs and patent medicine stores, household furnishings stores, and automotive parts and accessories. At the end of September, total retail trade was $6.9 billion, and on pace to beat total retail trade in 2002.

The value of building permits has increased by 14.9 percent, from $581 million to $668 million for the first ten months of 2003. The substantial rise has been the result of increased activity in residential construction. Through the third quarter of 2003, housing starts are up by 22.2 percent, relative to the same period of 2002. The bulk of new housing starts were in single family housing. Continued employment growth, coupled with low mortgage rates, has been the catalyst in demand for new housing.

The value of non-residential building permits has grown by about 3.9 percent. The value of permits for industrial

construction fell by about $6.4 million, but rose by $10.6 million and $9 million for commercial and institutional and governmental permits, respectively.



As new planned projects come to fruition, 2004 is expected to offer a generous increase in non-residential construction. It is expected that Husky will build a new oil upgrader in Lloydminster, and the University of Regina will complete its new residence and kinesiology buildings.

Total manufacturing shipments increased by $154 million, or 2.8 percent, through September of 2003, relative to the same period in 2002. The increases in manufacturing activity is due to a general strengthening of the North American economy.

One of the largest contributors to the rise in manufacturing shipments was chemical goods manufacturing, with an increase of $106 million to date, or a 23.0 percent increase. Wood product manufacturing also contributed, with a 29.0 percent increase, year to date, which translates to a dollar increase of $88 million.

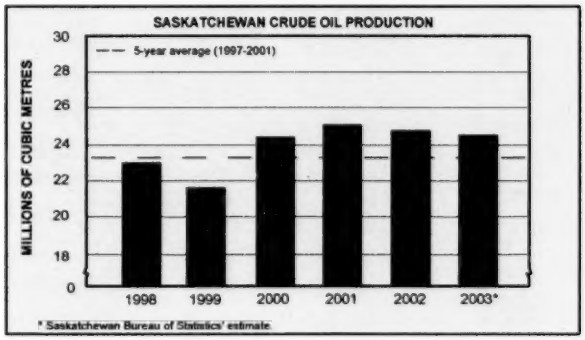
There were decreases in the manufacturing shipments from electrical equipment manufacturers, down 37.4 percent, or $64 million, and transportation equipment manufacturers, down 11 percent or $29 million. The rapidly increasing Canadian dollar has caused concern among manufacturers who export primarily to the United States, as this factor alone may cause diminished demand for Canadian products.

Mining, Oil and Gas

Natural gas production is on pace to beat 2002's total of 690 million cubic metres by 47 million cubic metres. The number of natural gas wells drilled in Saskatchewan hit a record high, with 2,134 gas wells drilled so far. High natural gas prices, and a recent change in oil and gas royalty arrangements in Saskatchewan resulted in an increase in drilling activity.

Natural gas sales have seen a surge in the first eight months of 2003, up 7.2 percent from the same time last year. Gross sales value is just over one billion dollars, double what is was for 2002 at this time. Natural gas prices are up 83.5 percent to date in 2003, averaging $6.31 per gigajoule through August.

Crude oil production has been about the same in 2003 as it was in 2002, and is on pace to equal last year's production, or come in slightly below. World oil prices have increased in the past year, due to low Iraqi oil production, and a supply crunch in the United States.



Primarily because of these large price increases, the gross value of crude oil sales is up by about 12.0 percent through the first eight months of 2003. Sales volume is actually down slightly, about 0.6 percent. The West Texas Intermediate crude oil price is up by 22.1 percent to date in 2003, averaging about US$31.00 per barrel.

In non-metal mining, output growth will result mostly from an increase in global demand for potash. Improved growing conditions worldwide have caused a surge in the demand for fertilizer, of which potash is a main ingredient. Sales volume of potash is up by 8.3 percent to date in 2003, though the average price per tonne is down just about 9.2 percent.

Consumer Price Index

Based on the first ten months of data from 2003, the average increase in the all-items Consumer Price Index (CPI) was 2.5 percent. Fueling the price increases were tobacco and alcohol, up 11.4 percent, shelter, up 3.1 percent, and food, up 2.2 percent.

The all-items CPI for Regina increased 2.5 percent, while the all-items CPI for Saskatoon increased 2.4 percent for the first ten months of 2003. The national average CPI increased 3.0 percent for the same period.

Saskatchewan Economic Accounts

The Saskatchewan Bureau of Statistics has developed a set of economic accounts which can be used to trace the development and growth of the Saskatchewan economy.

The purpose of the accounts is to measure the value of economic activity in each sector of the economy. This is done by means of a balancing set of accounts similar to the annual income and expenditure statements of a commercial enterprise.

The accounts have many useful functions. They consolidate information which is now provided through a number of scattered sources and organize it into a central framework. This allows many kinds of economic analysis to be performed ranging from monitoring current economic performance to analysis of structural change in the economy.

The Saskatchewan Bureau of Statistics has adopted the Chain-Fisher methodology for calculating Real Gross Domestic Product (GDP). With this release, the majority of the tables presented in the Saskatchewan Economic Accounts are now based on the Chain-Fisher method of calculating real GDP. A discussion paper regarding the Chain-Fisher methodology is available from the Saskatchewan Bureau of Statistics' website.

The Saskatchewan Bureau of Statistics has available, upon request, many more detailed tables and other information concerning the Saskatchewan Economic Accounts.

Saskatchewan Economic Accounts

Saskatchewan Gross Domestic Product (GDP) measures the total value of goods and services produced annually in the province. By removing the effects of inflation, it is possible to measure the volume of output. After adjusting for price changes, Saskatchewan's real Gross Domestic Product decreased by 1.0 percent in 2002 (chained 1997 prices).

In nominal terms, Saskatchewan's GDP increased by 2.8 percent in 2002 to $34,573 million. Personal expenditure on consumer goods and services rose by 4.8 percent. Spending rose by 8.4 percent on durable goods, 5.0 percent on non-durable goods and 3.4 percent on services. Government current expenditure on goods and services rose by 3.9 percent in 2002.

However, total investment decreased by 3.1 percent in 2002. The value of physical change in inventories was negative in 2002. Farm inventories decreased by $470 million while the value of physical change in non-farm inventories increased by $219 million.

In 2002, nominal exports relatively unchanged from 2001 levels. Nominal imports increased by 1.4 percent in 2002. In real terms, exports decreased by 5.4 percent and imports increased by 0.4 percent in 2002.

Personal income in Saskatchewan rose by 1.3 percent in 2002. Wages, salaries and supplementary incomes (on a Gross National Product basis) rose 3.5 percent and net income of non-farm unincorporated businesses increased by 5.1 percent. Net income received by farm operators declined into negative territory. After subtracting direct taxes, contributions to social insurance plans, and pension plan contributions, personal disposable income rose by 1.4 percent.

Real personal expenditure on consumer goods and services increased by 2.2 percent, government expenditures on goods and services increased by 1.6 percent, while real gross fixed capital formation decreased by 5.1 percent. Final domestic demand for goods and services by individuals, the government and for investment purposes increased by 0.4 percent in 2002.

This document represents an update to the Saskatchewan economic accounts, released in May 2002. Periodic revisions are common to all economic series, as more comprehensive data is obtained, in order to improve the accuracy, reliability and consistency of the data.
